

Download Car Radiator Repair Fluid

My car is loosing coolant, only slowly. Is it worth putting some kind of repair fluid in the radiator to try and plug the leak or is that just a worthless gimmick? You should check your car radiator's water or coolant levels every two weeks or so. On most cooling systems, there will be a visible maximum and minimum level indicator that car owners can use to judge the level of coolant – ideally it will always be between those two marks. Coolant levels will decrease naturally, but a large drop over a short space of time will indicate a car radiator leak. Find great deals on eBay for car radiator repair. Shop with confidence. Coolant leaks don't have to result in costly repair bills – simply add K-Seal to your coolant system for a quick and permanent fix. K-Seal is scientifically tested, trusted by millions of customers worldwide, and the only coolant leak repair fluid carried by the AA, the UK's largest roadside repair company., Car Radiator Repair Fluid.
