

Download Healthy Pregnancy Over 35

If you are older than age 35 and haven't been able to conceive for six months, consider asking your health care provider for advice. You're more likely to have a multiple pregnancy. The chance of having twins increases with age due to hormonal changes that could cause the release of multiple eggs at the same time. But if you're over 35 and generally healthy, your pregnancy should be too. "Traditionally 35 and older is considered a high risk pregnancy," says Hall. But since that number was coined 30 ...The risks associated with being over 35 and pregnant tend to be exaggerated. If you're in this age group, and are healthy, you can generally expect to have a successful pregnancy, so try not to worry. A Healthy Pregnancy over 35 Posted on December 8, 2014 by Zuleika Benitez More and more women are waiting to have families well into their late 30's and beyond., Healthy Pregnancy Over 35.
